

# THINK

## If one of your vehicles kills someone whose fault is it...

the driver, the Fleet Manager, or the Managing Director?

It may even be the pedestrian's fault but who will get the blame... the fine... the prison sentence...

When an accident occurs you need to demonstrate that you have taken adequate precautions. But there are many times when it's just not enough to fit cameras, reversing sensors or blind spot mirrors. You also need to communicate with anyone in the danger zone.

**Talking safety sounders from O.W.L. provide the solution.**

**Real voice messages for every safety application.**
